AnaCONT

LIQUID ANALYTICAL TRANSMITTERS

AnaCONT COMPACT pH, ORP and DO TRANSMITTERS

MAIN FEATURES

- Compact and integrated versions
- Separated versions up to 10m
- Measurement range: pH: 0-14, ORP: ±1000 mV, DO: 0-20 ppm
- Wide probe selection suitable for most applications
- Temperature compensation
- Graphic display
- 4-20 mA, HART, relay output
- IP67 / IP68 protection
- Ex version

APPLICATIONS

- Checking of water quality
- Wastewater treatment
- Pharmaceutical industry
- Food and beverage industry
- Effluent treatment
- Checking of aeration in potable water
- Pools

OPERATION

The **AnaCONT** liquid analytical transmitters are designed to measure pH, redox potential, or dissolved oxygen values of liquids and aqueous solutions.

pH measurement: Continuous measurement of acidity (pH<7) and of basicity (pH>7) in liquids can be performed by the help of AnaCONT transmitters. The necessary feeding of chemicals and other technological functions can be controlled by the processed measured values. The potential difference between the submerged measuring and reference probe generates a voltage proportional to the concentration of the hydrogen ion in the measured fluid. This voltage is evaluated by the signal processing electronic module of the instrument. Based on the signals of the submerged probe and the temperature sensor the smart signal processing electronic module calculates a pH value normalized to 25°C and generates a proportional output signal. The long term stability and accuracy of the measurement requires a periodic calibration of the sensors using the standard buffer solutions.

Redox potential (ORP) measurement: Similarly to the pH measurement, the measurement of the redox potential is based on the potential difference between measuring and reference probes. Oxidation or reduction occurs on the platinum surface of the measuring probe. Redox potential is a parameter that indicates the sum of oxidants and reducers in the measured medium. The output signals of the probes are processed by the electronic unit and it converts them into a proportional output signal. In order to get the desired medium parameters the reduction of liquids or feeding of suitable oxidant is executed based on the formerly processed values.

Dissolved oxygen (DO) measurement: The dissolved oxygen (DO) measurement gives the quantity of dissolved oxygen gas in the liquid, in ppm or mg/l values. The sensor with oxygen-permeable membrane immersed in the liquid provides an electronic signal proportional to the oxygen concentration. The intelligent electronics calculates and transmits the DO value normalized to 25°C on the basis of the output current of the DO sensor and the potential of the temperature sensor immersed in the medium.

PROBE SELECTION

pH probes

Medium	Max. temp. (°C)	Max. pressure (bar)	Min. conductivity (µS/cm)	pH	Material	Mounting angle	Application area
Clean liquid	60	0,5	150	1-12	glass	max. 45°	potable water, pool
	60	3		1-12			potable water, pool
	80	6		1-12			process water, galvanic
	80	8		1-12			process water, treated wastewater
	100	3 / 100°C; 6 / 25°C		3-14			chemical industry
	60	3		1-12	polycarbonate	max. 90°	potable water, pool
Solid particles in the medium	80	6	50	1-12	glass	max. 45°	treated wastewater
	100	6 / 100°C; 16 / 25°C	500	1-12			sludge, emulsion

ORP probes

Medium	Max. temp. (°C)	Max. pressure (bar)	Min. conductivity (µS/cm)	Material	Mounting angle	Application area
Clean liquid	60	1	150	glass	max. 45°	potable water, pool
	60	3				potable water, pool
	80	6				process water
	60	3		polycarbonate	max. 90°	potable water, pool, treated wastewater
Solid particles in the medium	80	6	50	glass	max. 45°	sludge, emulsion
	100	6 / 100°C; 16 / 25°C	500			sludge, emulsion

DO sensors

Type		4x085g0023ydo	4x085g0022ydo
DO sensor	Application area	Fish- and crawfish farms, water conditioning of large aquariums. Controlling of oxygen concentration in water plants, determination of biological condition in surface water. 	Potable water production, river monitoring, water treatment sites, controlling of dissolved oxygen level in wastewater plants, determination of biological condition in surface water. 
	DO range	0-20 ppm	0-10 ppm
	Process temperature	max. 50°C	
	Process pressure	max. 1 bar	
	Speed of medium-flow	min. 0.05m/s	
	Material / thickness of membrane	PTFE / 125 µm	PTFE / 50 µm

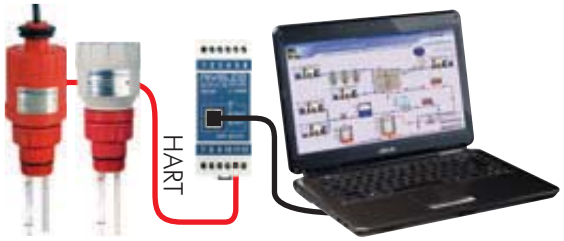
AnaCONT IN SYSTEM WITH A PC

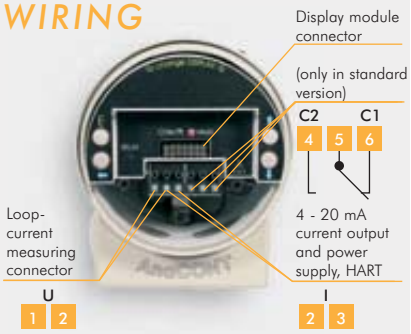
The instrument with HART output can be connected to a PC using a **UNICOMM** HART-USB modem. Max. 15 normal instruments can be connected to a HART line. Measured values can be visualised and/or the instruments can be programmed via digital HART communication. Applicable software: **EView** configuration software or **NIVISION** process visualization software.

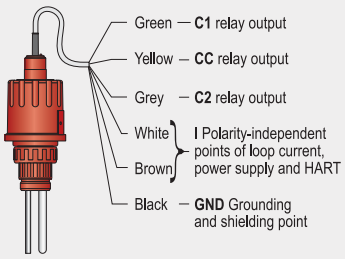


AnaCONT IN SYSTEM WITH MultiCONT

The **MultiCONT** can handle digital data from up to 15 HART transmitters for the measuring of different values (e.g. DO temperature, level, pressure). The digital (HART) information is processed, displayed and if needed it can be transmitted via RS485 communication line to a PC. Remote programming of the transmitter is also possible. Visualisation on a PC can be accomplished with **NIVISION** process visualisation software.

WIRING





CONFIGURATIONS

The constructions of the sensors on the compact and integrated versions are identical, so all accessories are applicable for both types.

The applications of the special accessories make the optimal installation of the transmitters into the technologic process easier.

By using extension pipes or extension cables the separated versions allow the mounting of the electronics and the sensor part at any distance from each other.

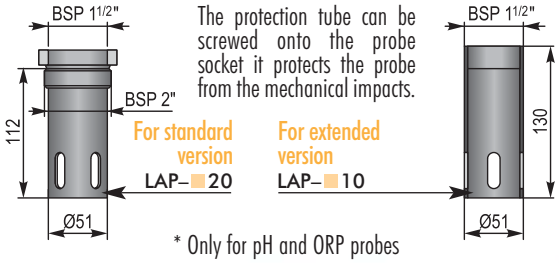
SENSOR PROTECTION TUBE*



The protection tube can be screwed onto the probe socket it protects the probe from the mechanical impacts.

ORDER CODES (PROBES, SOLUTIONS)

Wide range of measurement probes are available to order for continuous and reliable operation.
The originally included sensor can be replaced when case its lifespan is over. Sensor replacement can be necessary also if the used technology changes significantly. The offered solutions are recommended for required periodic calibrations, and storing or cleaning of the probes.
